

Riyan Al-Ghamdi

riyanalghamdiofficial@gmail.com — +44 7393807556
github.com/riyan707 — riyanalghamdi.com — London, UK

Key skills: JavaScript, TypeScript, Python, SQL, Node.js, Next.js, React, Supabase, PostgreSQL, Docker, Git, Linux, n8n, REST APIs, Agile, Stakeholder Management, Power BI (developing)

- 2+ years of commercial experience architecting and delivering full stack applications, data pipelines, and automation systems across live production environments
- Funded FX trader with real financial markets exposure — engineered an automated forex trading bot in Python with Docker containerisation to systematise a rules-based trading strategy
- Client-facing technology consultant who has independently acquired clients, defined solution requirements, and delivered digital transformation outcomes saving stakeholders 50+ hours per week
- Promoted to Shift Manager at Amazon within 15 months — leading operational teams, driving KPI performance, and implementing process improvements across high-volume logistics workflows

EMPLOYMENT HISTORY

Freelance Developer & Systems Analyst

Jan 2024 – Present

Self-Employed

- Engaged clients across multiple sectors, conducting requirements workshops, defining solution architecture, and delivering end-to-end technology implementations aligned to business objectives
- Engineered n8n automation pipelines integrating multi-source data feeds, reducing manual processing overhead by 50+ hours per week and improving operational data integrity
- Architected and deployed full stack web applications using Next.js, React, Node.js and PostgreSQL/Supabase — managing UI, API middleware, database schema design and CI/CD pipelines
- Developed and optimised SQL queries to extract, transform and surface structured datasets for both technical stakeholders and C-suite decision makers
- Maintained comprehensive project documentation, version control governance and stakeholder communication cadence across concurrent client engagements

Web Developer

Jun 2025 – Sep 2025

Rhazes.ai

- Owned and delivered a full production site rebuild in under four weeks as the sole engineer, meeting a hard product launch deadline with zero quality compromise
- Operated across the full stack on Linux — managing dependency resolution, environment configuration and Vercel deployment pipeline via Git-based CI/CD
- Designed a scalable content management architecture with custom database schema, enabling rapid editorial workflows and future feature expansion
- Served as the primary technical liaison to the CEO, translating complex engineering decisions into clear business language and managing scope throughout delivery

Front-end Developer (Internship)

Dec 2023 – Mar 2024

Rhazes.ai

- Embedded in an agile sprint team delivering an AI-powered web application, contributing to planning ceremonies, iterative development and peer code reviews
- Rapidly acquired Next.js proficiency and delivered production-ready components within weeks — demonstrating the fast-ramp capability critical in consulting and delivery environments

Shift Manager

Jan 2026 – Present

Amazon

- Promoted to Shift Manager within 15 months — accountable for end-to-end shift operations, team performance and KPI delivery across a high-volume logistics network
- Leverage real-time operational dashboards and performance data to identify inefficiencies, reallocate resource and drive continuous improvement across the shift
- Lead, coach and performance-manage a team of delivery drivers, conducting structured reviews and maintaining accountability frameworks to operational standards
- Collaborate cross-functionally with station leadership to scope and implement process improvement initiatives, resolving escalations and removing blockers under time pressure

Logistics Driver

Oct 2024 – Jan 2026

Amazon

- Consistently exceeded delivery KPIs and compliance benchmarks in a metrics-driven, high-accountability environment — demonstrating the performance mindset that drove promotion to management

Sales Associate (Shift Lead)

Oct 2021 – Oct 2024

Sainsbury's

- Led cross-functional shift teams in a fast-paced retail environment, developing stakeholder management, team leadership and operational coordination skills
- Utilised internal data systems to monitor stock levels and sales performance, developing practical awareness of how operational analytics inform business decisions

PERSONAL PROJECTS

forex-bot

2024

Python, Docker · github.com/riyan707/forex-bot

- Automated FX trading system engineered in Python, containerised with Docker and structured across config, models, src and utils modules — 49 commits of iterative development with test coverage and bash deployment scripting
- Translated a manual, rules-based trading strategy into a systematic automated execution framework — the same analytical process as converting business requirements into a technology solution

client-tech-decider

2024

TypeScript, Next.js, Drizzle ORM · github.com/riyan707/client-tech-decider

- Full stack decision-support application guiding users to optimal technology stacks via a structured quiz — TypeScript, Next.js, React, Drizzle ORM with type-safe schema design, deployed on Vercel with CI/CD

timelapse-encoder

2024

Python, FFmpeg · github.com/riyan707/timelapse-encoder

- Python desktop application wrapping FFmpeg for timelapse video creation — Tkinter GUI, Watchdog-based folder monitoring, configurable encoding parameters and bundled FFmpeg binary for zero-dependency deployment

CLIENT WORK

thetechmaster.co.uk

2024 – Present

Full Stack Web — Next.js, Tailwind CSS, Node.js

- Designed and built a full production website end to end including UI, backend integration and deployment — live at thetechmaster.co.uk

rhazes.ai

2023 – Present

Full Stack Web — Next.js, Tailwind CSS, Supabase

- Delivered multiple development cycles for an AI startup including front-end build, CRM integration and full site rebuild — live at rhazes.ai

dsgnrlabs.com

2024 – Present

Brand & Web — Next.js, Tailwind CSS

- Built and maintain my own design and development studio brand — live at dsgnrlabs.com, serving as a showcase of UI design and full stack development capability

fuloos.co.uk

2024

E-commerce — Shopify, Klaviyo, Meta Ads

- Delivered a full e-commerce solution for a clothing brand — Shopify storefront, Klaviyo email automation and Meta Ads integration — live at fuloos.co.uk

FINANCIAL SERVICES BACKGROUND

- Funded FX Trader — passed a structured proprietary trading evaluation and traded with firm capital in live foreign exchange markets, developing deep understanding of risk management frameworks, market microstructure and data-driven decision making under pressure
- Engineered an automated Python trading bot (Docker containerised, 49 commits) to systematise a manual strategy — bridging domain expertise and technical implementation in the same way architecture consulting bridges business and technology

EDUCATION

BSc (Hons) Business Computing — Upper Second Class (2:1)

Sep 2022 – Jun 2025

Brunel University London

- Core modules: Database Design and SQL, Business Intelligence and Analytics, Systems Analysis and Design, Software Development, Project Management and Agile Methods, Statistics and Data Analysis, Commercial Computing Strategy

CERTIFICATIONS & ADDITIONAL

- Digital Marketing — HubSpot Academy (Certified)
- Actively developing: Power BI, Python data analysis libraries (pandas, matplotlib), Docker/Kubernetes, AWS/GCP cloud fundamentals
- Languages: English (Native) and Arabic (Native)
